

## Introducing the Pro-Filer

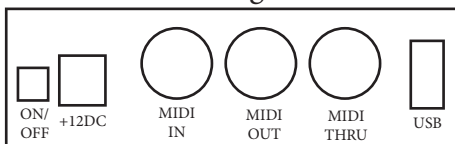

The organ industry has long awaited a good solution to record and play back MIDI messages. Our sequencer fills the need by merging modern technology with a simple, easy to use, design. A graphical color display creates a better experience for the organist rather than cryptic numeric displays. Songs are written directly to a USB drive for increased storage and portability. Entire hymnals can be recorded and stored on a single USB drive. Compact in design, the Pro-Filer takes up minimal space on a console without diverting attention from the instrument's natural beauty.

Available the beginning of 2010
